RAISE THE ROOF AND REDUCE ENERGY COSTS

A TOPHAT ROOF BOOSTS ENERGY SAVINGS AND SUSTAINABILITY

Additional Air Space

The structural space between the existing roof and the new TopHat roof creates a thermal break. This air space not only results in increased energy efficiency, but also allows for the application of additional insulation, which can generate even greater energy savings.

Customized Depth

The TopHat roofing system can be fabricated to suit a variety of building specifications and accommodate a range of insulation requirements.

Cool Metal Capability

Use cool-metal roofing materials with the TopHat roofing system for optimal energy savings. Choosing cool metal roofing on your next project is both cost effective and good for the environment. For more information, visit www.coolmetalroofing.org

TopHat's unique combination of energy-saving thermal break, additional insulation and cool metal roof can also generate tax savings for the building or business owner.

Meeting Clean Energy Standards

By helping meet ENERGY STAR® or LEED (Leadership in Energy and Environmental Design) Green Building Rating System™ standards, the TopHat roofing system can increase potential tax credits, lower heating and cooling costs and add to an environmentally friendly building.

Optional SolR™ Panels

You can now select an affordable, state-of-the-art solar standing seam roof system. Visit www.coolmetal.com/solr for more information

Reduce Landfill Use

Think sustainable. Install a TopHat system and your old roof stays right where it is, not in a landfill.

Recycled Content

The TopHat Subframe, US200DL and US175LS panels are manufactured from steel that typically has a recycled content of about 25%.
